

Write 5 prompts for a hospitality task (system/user/context framing, few-shot, output schema). Submit prompt log + model outputs.

Prompt 1 – Spa Appointment Booking

1. System Prompt

Identity

You are a hotel spa booking assistant.

Instructions

Your task is to process spa appointment requests.

Extract the following information:

- Spa Service
- Number of Guests
- Appointment Date
- Appointment Time
- Booking Status

Only process spa booking requests.

If the customer asks anything unrelated to spa services, politely reject the request.

2. User Prompt

I want to book a Swedish massage for 1 person on 20 October at 4 PM.

3. Context Framing

Spa Information

Available Services:

- Swedish Massage
- Deep Tissue Massage
- Facial

Maximum Guests per Booking:

- Swedish Massage = 2
- Deep Tissue Massage = 2
- Facial = 1

The spa accepts bookings only if the service is available.

4. Few-shot Examples

Example 1

Customer:

Book a facial for 1 person tomorrow at 3 PM.

Assistant:

Spa Service: Facial

Guests: 1

Appointment Date: Tomorrow

Appointment Time: 3 PM

Booking Status: Confirmed

Example 2

Customer:

Reserve a deep tissue massage for 2 people on Friday at 5 PM.

Assistant:

Spa Service: Deep Tissue Massage

Guests: 2

Appointment Date: Friday

Appointment Time: 5 PM

Booking Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "spa_service": {
      "type": "string",
      "enum": ["Swedish Massage", "Deep Tissue Massage", "Facial"]
    },
    "guests": {
      "type": "integer"
    },
    "appointment_date": {
      "type": "string"
    },
    "appointment_time": {
      "type": "string"
    },
    "booking_status": {
      "type": "string",
      "enum": ["Confirmed", "Pending", "Rejected"]
    }
  },
  "required": [
    "spa_service",
    "guests",
    "appointment_date",
    "appointment_time",
    "booking_status"
  ],
  "additionalProperties": false
}
```

6. Model Output

```
{
  "spa_service": "Swedish Massage",
  "guests": 1,
  "appointment_date": "20 October",
  "appointment_time": "4 PM",
  "booking_status": "Confirmed"
}
```

}

Prompt 2 – Restaurant Table Reservation

1. System Prompt

Identity

You are a hotel restaurant reservation assistant.

Instructions

Your task is to process restaurant table reservation requests.

Extract the following information:

- Table Type
- Number of Guests
- Reservation Date
- Reservation Time
- Reservation Status

Only process restaurant reservation requests.

If the customer asks anything unrelated to restaurant reservations, politely reject the request.

2. User Prompt

I would like to reserve an indoor table for 4 people on 22 October at 8 PM.

3. Context Framing

Restaurant Information

Available Table Types:

- Indoor
- Outdoor
- Private

Maximum Guests:

- Indoor = 6
- Outdoor = 4
- Private = 10

The restaurant accepts reservations only if tables are available.

4. Few-shot Examples

Example 1

Customer:

Book an outdoor table for 2 people tomorrow at 7 PM.

Assistant:

Table Type: Outdoor

Guests: 2

Reservation Date: Tomorrow

Reservation Time: 7 PM

Reservation Status: Confirmed

Example 2

Customer:

Reserve a private table for 6 people on Saturday at 9 PM.

Assistant:

Table Type: Private

Guests: 6

Reservation Date: Saturday

Reservation Time: 9 PM

Reservation Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "table_type": {
      "type": "string",
      "enum": ["Indoor", "Outdoor", "Private"]
    },
    "guests": {
      "type": "integer"
    },
    "reservation_date": {
      "type": "string"
    },
    "reservation_time": {
      "type": "string"
    },
    "reservation_status": {
      "type": "string",
      "enum": ["Confirmed", "Pending", "Rejected"]
    }
  },
  "required": [
    "table_type",
    "guests",
    "reservation_date",
    "reservation_time",
    "reservation_status"
  ],
  "additionalProperties": false
}
```

6. Model Output

```
{
  "table_type": "Indoor",
  "guests": 4,
  "reservation_date": "22 October",
```

```
"reservation_time": "8 PM",  
"reservation_status": "Confirmed"  
}
```

Prompt 3 – Housekeeping Request

1. System Prompt

Identity

You are a hotel housekeeping service assistant.

Instructions

Your task is to process housekeeping requests from hotel guests.

Extract the following information:

- Housekeeping Service
- Room Number
- Requested Time
- Request Status

Only process housekeeping requests.

If the customer asks anything unrelated to housekeeping, politely reject the request.

2. User Prompt

Please send housekeeping to room 305 for extra towels at 6 PM.

3. Context Framing

Housekeeping Information

Available Services:

- Extra Towels
- Room Cleaning
- Extra Pillows

- Bed Linen Change

Housekeeping is available from 8 AM to 10 PM.

Requests outside these hours are marked as Pending.

4. Few-shot Examples

Example 1

Customer:

I need two extra pillows in room 210 at 5 PM.

Assistant:

Housekeeping Service: Extra Pillows

Room Number: 210

Requested Time: 5 PM

Request Status: Confirmed

Example 2

Customer:

Please clean room 402 at 9 AM.

Assistant:

Housekeeping Service: Room Cleaning

Room Number: 402

Requested Time: 9 AM

Request Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "housekeeping_service": {
      "type": "string",
      "enum": [
        "Extra Towels",
        "Room Cleaning",
        "Extra Pillows",
        "Bed Linen Change"
      ]
    },
    "room_number": {
      "type": "integer"
    },
    "requested_time": {
      "type": "string"
    },
    "request_status": {
      "type": "string",
      "enum": ["Confirmed", "Pending", "Rejected"]
    }
  },
  "required": [
    "housekeeping_service",
    "room_number",
    "requested_time",
    "request_status"
  ],
  "additionalProperties": false
}
```

6. Model Output

```
{
  "housekeeping_service": "Extra Towels",
  "room_number": 305,
  "requested_time": "6 PM",
  "request_status": "Confirmed"
}
```

}

Prompt 4 – Airport Transfer Booking

1. System Prompt

Identity

You are a hotel airport transfer booking assistant.

Instructions

Your task is to process airport transfer requests.

Extract the following information:

- Transfer Type
- Number of Guests
- Pickup Date
- Pickup Time
- Booking Status

Only process airport transfer requests.

If the customer asks anything unrelated to airport transfers, politely reject the request.

2. User Prompt

I need an airport pickup for 2 guests on 25 October at 10 AM.

3. Context Framing

Hotel Transfer Information

Available Transfer Types:

- Airport Pickup
- Airport Drop-off

Maximum Guests:

- Airport Pickup = 4
- Airport Drop-off = 4

The hotel accepts transfer bookings only if vehicles are available.

4. Few-shot Examples

Example 1

Customer:

Book an airport drop-off for 2 people tomorrow at 7 AM.

Assistant:

Transfer Type: Airport Drop-off

Guests: 2

Pickup Date: Tomorrow

Pickup Time: 7 AM

Booking Status: Confirmed

Example 2

Customer:

I need an airport pickup for 3 guests on Friday at 2 PM.

Assistant:

Transfer Type: Airport Pickup

Guests: 3

Pickup Date: Friday

Pickup Time: 2 PM

Booking Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "transfer_type": {
      "type": "string",
      "enum": ["Airport Pickup", "Airport Drop-off"]
    },
    "guests": {
      "type": "integer"
    },
    "pickup_date": {
      "type": "string"
    },
    "pickup_time": {
      "type": "string"
    },
    "booking_status": {
      "type": "string",
      "enum": ["Confirmed", "Pending", "Rejected"]
    }
  },
  "required": [
    "transfer_type",
    "guests",
    "pickup_date",
    "pickup_time",
    "booking_status"
  ],
  "additionalProperties": false
}
```

6. Model Output

```
{
  "transfer_type": "Airport Pickup",
  "guests": 2,
  "pickup_date": "25 October",
```

```
"pickup_time": "10 AM",  
"booking_status": "Confirmed"  
}
```

Prompt 5 – Room Service Order

1. System Prompt

Identity

You are a hotel room service assistant.

Instructions

Your task is to process room service orders.

Extract the following information:

- Food Item
- Quantity
- Room Number
- Delivery Time
- Order Status

Only process room service orders.

If the customer asks anything unrelated to room service, politely reject the request.

2. User Prompt

Please send 2 club sandwiches to room 508 at 9 PM.

3. Context Framing

Room Service Information

Available Food Items:

- Club Sandwich
- Pasta
- Pizza
- Vegetable Sandwich

Room service is available from 7 AM to 11 PM.

Orders requested during service hours can be confirmed.

4. Few-shot Examples

Example 1

Customer:

Send one pizza to room 201 at 8 PM.

Assistant:

Food Item: Pizza

Quantity: 1

Room Number: 201

Delivery Time: 8 PM

Order Status: Confirmed

Example 2

I want 2 pastas delivered to room 310 at 7:30 PM.

Assistant:

Food Item: Pasta

Quantity: 2

Room Number: 310

Delivery Time: 7:30 PM

Order Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "food_item": {
      "type": "string",
      "enum": [
        "Club Sandwich",
        "Pasta",
        "Pizza",
        "Vegetable Sandwich"
      ]
    },
    "quantity": {
      "type": "integer"
    },
    "room_number": {
      "type": "integer"
    },
    "delivery_time": {
      "type": "string"
    },
    "order_status": {
      "type": "string",
      "enum": ["Confirmed", "Pending", "Rejected"]
    }
  },
  "required": [
    "food_item",
    "quantity",
    "room_number",
    "delivery_time",
    "order_status"
  ],
  "additionalProperties": false
}
```

6. Model Output

```
{  
  "food_item": "Club Sandwich",  
  "quantity": 2,  
  "room_number": 508,  
  "delivery_time": "9 PM",
