

"Deploy a sample app to an Azure App Service deployment slot; register it in Azure AD; write a short AWS-IAM-vs-Azure-AD RBAC comparison note"

Module 1: Azure App Service & Microsoft Entra ID Essentials

Exercise 1: Deploy a web app to Azure App Service using a deployment slot for staged rollout

In App services

select create

select webapp

under basics tab , resource group name itc-geetha-assign

select container

select review + create

click create

click on got to resource

click on default domain url to check if it running

it successfully is running

now under deployment in the side panel go to deployment slots

select add

set name : staging

clone settings from select the created name one

click add

after successful deployment , click on itc-geetha-assign-staging

check the domain url again

go back to previous(deployment slots) page

select swap

source is itc-geetha-assign-staging

target is iyc-geetha-assign

click start swap

Exercise 2: Register an application in Microsoft Entra ID

go to entra.microsoft.com

under entra id select app registrations

click on new registration

give name itc-geetha-assign-app

under supported account types, choose the one with KloudKraft in it

select register

copy application (client) ID : 06a54b8e-7d33-4522-8882-36e4d418c8ae

even Directory(tenant) ID : b004a8b0-87e2-43c3-9940-c62feee15ff9

Module 2: Azure Storage & Cross-Cloud Security Essentials

Exercise 1: Create Blob and Table storage for the capstone application

in azure portal, open storage accounts

select create

under basics

for resource group select name associated with LabsKraft : LabsKraft-adm

give storage account name : itcgeestorage

region , same as in the first step while creating app , (US) West US 3

select primary service as azure blob or azure data leakage storage

click review+create

click on create

click go to resource

under data storage select containers

click add container

name it : itc-geetha-container

select create

from left panel select storage browser

select tables

click add table

name : itcgeedata

click ok

Exercise 2: Write a least-privilege RBAC policy set spanning the capstone's AWS IAM and Microsoft Entra ID resources

again on left panel, search for IAM

select add and add role assignment

in search box select : Storage Blob Data Reader

click next

in members, select +select members

select the one you created in module : itc-geetha-assign-app

click on review +assign

Exercise 3 : write a short AWS-IAM-vs-Azure-AD RBAC comparison note.

AWS IAM	Azure RBAC
IAM Role name : Principal	applicant(client)ID : 06a54b8e-7d33-4522-8882-36e4d418c8ae
Resource ARN(s): 1. arn:aws:s3:::my-bucket-12345 2. arn:aws:s3:::my-bucket-12345/*	built-in role assigned : storage Blob data reader
Policy: S3ReadOnlyAccess (Read-only S3 access)	storage account name: itc-geetha-assign-app
